

Chilled and Hot Water Piping

Application: Chilled and hot water lines for heating and air conditioning system update

Location: Milwaukee, Wisconsin

Product: Approximately 22,600 feet of Green Thread® and Silver Thread® pipe plus several thousand tees, saddles and other fittings that were installed in building columns through access doors.

Features & Benefits: The light weight of the piping made it easy to handle and minimized the additional structural load on the building. Assembly of on-site prefabrications allowed faster installation.

Due to the products' excellent thermal properties, reduced insulation was required on chilled water lines. Fiberglass pipe is corrosion resistant to condensate return and retains its strength at elevated temperatures.
